East Montpelier, VT 05651 - Open to Remote Roles

SUMMARY

Senior Frontend Engineer and Technical Lead with 6 years driving digital transformation in fintech and enterprise environments. Delivered high-impact solutions that improved transaction success rates by 25%, reduced production bugs by 40%, and optimized platform performance by 35%. Expert in leading cross-functional teams to architect scalable applications using TypeScript, React, and Vue.js, with proven success mentoring engineers and implementing modern CI/CD practices that accelerate product delivery.

EXPERIENCE

Mastercard

Technical Lead

December 2024 – Present

- Led cross-functional team of 13 engineers building Mastercard's next-generation checkout application, successfully launching across 45+ international markets
- Architected and delivered production-grade Vue.js and React applications serving high-traffic retailers including AliPay, Costco, and Shein
- Increased checkout conversion rates by 4% through data-driven UX optimizations and frontend performance enhancements, directly impacting millions in transaction volume
- Drove strategic technical decisions by facilitating roadmap discussions and conducting risk assessments with VP-level engineering and product leadership

Senior Software Engineer / Service Architect

March 2023 – December 2024

- Spearheaded end-to-end development of Mastercard's latest checkout solutions, owning the entire lifecycle from initial prototyping through global production rollout
- Designed scalable microservices architecture and API contracts for Fortune 500 merchants
- Accelerated team velocity by 30% through systematic mentoring of junior engineers and implementing regular pair programming and knowledge-sharing sessions
- Optimized agile delivery processes by leading sprint planning, daily standups, and retrospectives for a distributed team across 3 time zones

Senior Software Engineer

March 2021 – March 2023

- Improved SDK performance by 20% by implementing asynchronous initialization patterns for Mastercard's Unified Checkout SDK, enhancing user experience across millions of transactions
- Co-led frontend development for globally-deployed SDK now processing tens of millions of transactions annually across 6 continents
- Streamlined deployment processes by maintaining Jenkins CI/CD pipelines and automated workflows across 10+ microservices, reducing deployment time by 40%

Flatiron School

Software Engineer / Curriculum Manager

April 2019 – March 2021

- Led engineering team maintaining Flatiron's open-source full-stack curriculum covering Ruby on Rails, JavaScript, and React, serving 2,000+ students globally
- Developed automated tooling and Ruby gems for large-scale content management, reducing manual curriculum updates by 60% and improving consistency across 20+ course modules

TECH STACK

Languages: TypeScript, JavaScript, Ruby

Frameworks: React, Vue, Rails

Tools & Skills: Git, Jenkins, CI/CD, Technical Architecture, Agile, Scrum, MVC, TDD, BDD
